Okeanos Aquaguard

What is Okeanos Aquaguard

Okeanos AquaGuard reduces or completely eradicates the invasive species Crassula helmsii. Okeanos AquaGuard is designed to control invasive and persistent aquatic weeds, and it is particularly effective among its counterparts in preventing the growth of the foreign and invasive species Crassula Helmsii.

Features and Benefits

- Reduces or completely eradicates invasive plant species in your pond.
- Imparts a deep blue color to the water, preventing sunlight from nourishing invasive plants.
- Also used to slow down or halt the growth of Chara, a type of algae resembling aquatic weeds.
- Reduces algae growth by blocking sunlight with its nano-technological ingredients.
- Eliminates the need for harmful chemicals, such as chlorine.
- Easy to use with simple application methods, requiring no additional equipment.
- Safe for aquatic life.
- Can be used safely in any season.
- Reduces manual labor required for controlling invasive plant species.
- Highly economical compared to traditional disinfection chemicals.

Dosage Instructions

Okeanos AquaGuard is typically used in large ponds and is packaged in 250-gram water-soluble sachets. These sachets make it easy to calculate the required dosage. One sachet is used for every one million liters of water. Okeanos AquaGuard is available in 1 kg containers.

Okeanos Aquaguard

Okeanos AquaGuard is Environmentally Friendly

Okeanos AquaGuard does not contain herbicides, pesticides, or algaecides, which helps prevent excess nitrogen. Excess nitrogen, if uncontrolled, can lead to algal blooms, causing algae to multiply in record numbers. Algal blooms can harm other plants and fish, making them detrimental to the overall pond ecosystem. With Okeanos AquaGuard, you can maintain a natural-looking, wildlife-friendly pond that provides an enjoyable environment for your family.
